Through the Better Evidence Program, students and faculty at [Insert University Name] can now access UpToDate, the premier clinical decision support tool authored by 7,100 world-renowned physicians who synthesize the most recent medical information into trusted, evidence-based recommendations accessible via the web or download, on a computer or a smartphone.

Over 1.9 million clinicians in over 190 countries and 90% of major academic medical centers in the United States rely on UpToDate to find the answers to pressing questions. Every day, clinicians view topics covering 25 specialties over 1.6 million times. For more on how the information is created, please visit: <https://www.uptodate.com/home/editorial>.

[Research studies](#) confirm the association of the use of UpToDate with improved patient care and hospital performance—including reduced length of stay, fewer adverse complications, and lower mortality. Studies also show that providers using UpToDate perform better on standardized exams.

To register for UpToDate, visit www.UpToDate.com from a device connected to your institution's IP address and select "register." This will allow users to create a username and password.

About the Better Evidence Program:

Better Evidence is a program at [Ariadne Labs](#) -- a joint health system innovation center at Harvard T.H. Chan School of Public Health and the Brigham and Women's Hospital -- that seeks to enhance uptake of the latest clinical evidence among current and future health care providers serving vulnerable populations. Since 2009, the Better Evidence team has facilitated free UpToDate subscriptions for over 30,000 qualified health professionals in more than 120 countries, approximately half of whom had no prior access to online resources. Better Evidence serves both providers and students and affiliated faculty.
